Objective

Machine Learning Engineer and Master of Mathematics student with experience building and deploying production-grade ML models, RAG pipelines, and cloud-backed data solutions. Skilled in Python, PyTorch, AWS, and LLM integration. Eager to apply applied machine learning and scalable data engineering to complex production systems.

Education

Master of Mathematics <i>University of Silesia, Katowice</i>	10/2025 - ongoing
Relevant Coursework: Machine learning in Python, Markov chains applications, Data analysis in Python, Forecasting time series	
Bachelor of Mathematics <i>University of Silesia, Katowice</i>	10/2021 - 11/2024
Relevant Coursework: Machine learning in Python, Probability theory, Stochastic calculus, Statistics	

Skills

Programming Languages	Python, R, SQL
ML/AI Frameworks	PyTorch, TensorFlow, scikit-learn, Hugging Face, LangChain, LangGraph, MLFlow, Docling
Cloud & DevOps	AWS, Azure, Docker, Kubernetes, CI/CD
Data Engineering	ETL, Data Pipelines, Azure Data Factory
Other Tools	FastAPI, REST APIs, Elasticsearch, Redis
Languages	Polish (Native), English (C1), German (A2)

Experience

GenAI/ML Engineer <i>PwC</i>	01/2026 - ongoing <i>Remote</i>
- Integrated GenAI solutions and RAG clients connected with SharePoint documentation (Python, Azure, SharePoint) to enable deep insight and knowledge retrieval for advisory frameworks. - Developed ETL pipelines using Azure Data Factory and built backend architecture for critical applications, reducing support response times through intelligent documentation chatbots. - Modified and extended open-source software, developed cost-saving gateways for shared computing resources, and debugged memory leaks to improve system stability and reduce infrastructure costs.	
Machine Learning Engineer <i>Binderless</i>	11/2024 - 12/2025 <i>Remote</i>
- Engineered and deployed ML models across production environments (Python, PyTorch, TensorFlow, SciKit-Learn, AWS, CI/CD) reducing client operational time by 53%. - Fine-tuned core NLP models, increasing key performance metrics (F1-score) by approximately 10%. - Developed advanced LLM solutions including RAG and Agentic Document Extraction pipelines, conducting deep Exploratory Data Analysis using NumPy and Pandas.	
Junior Data Engineer <i>DXC Technology</i>	03/2023 - 11/2024 <i>Remote</i>
Maintained and modified data pipelines in Azure Data Factory, validated data in Azure Data Lake Storage, and wrote SQL queries for reporting.	

- Developed Python scripts utilizing Pandas and NumPy to transform data, clean datasets, and fix missing metadata in 20,000+ client invoices in a production environment.

Projects

Binderless CDE Platform - professional

2025

Description: A Common Data Environment platform designed to centralize construction project documentation into a single digital workspace with version control and automated workflows.

Technologies: Python, PyTorch, TensorFlow, SciKit-Learn, AWS, ElasticSearch

- Developed and deployed full LLM-based RAG and ETL pipelines, reducing client operational time by 53% and increasing ML model F1-score by approximately 10% via fine-tuning (Python, PyTorch, TensorFlow, AWS, ElasticSearch).

Listelle Support Platform - professional

2026

Description: An intelligent chatbot and support platform designed to assist support teams in resolving client cases using contextual documentation insights.

Technologies: Python, Azure Data Factory, Azure, RAG, LLMs, SharePoint, Langflow

- Built a custom backend application with a Retrieval-Augmented Generation (RAG) knowledge base integrated directly with SharePoint documentation to automatically index documents and reduce support response time (Python, Azure Data Factory, Azure, RAG, LLMs, SharePoint, Langflow).

DVS Module Development (Data Validation Solution) - professional

2026

Description: A data validation submodule within a larger Data Operating Suite system focused on software modification, data pipelines, and LLM integration.

Technologies: Python, ETL Pipelines, LLM Integration

- Modified open-source software, designed ETL pipelines, and developed a gateway mechanism to lower shared computing costs while resolving memory leaks and improving system stability.
